Paper Exam Grader

Free for all university instructors

An online platform that lets instructors create, randomize, and auto-grade paper exams in under 15 minutes. No Scantron forms, no special equipment, no departmental license required. Each student can receive their own randomized exam, so a copied answer is far less useful.

Unlimited	< 2	$0	99.9%*
Unique Exam Versions	Minutes to Grade	Cost to Instructors	Accuracy Rate

*For printed multiple-choice exams on a standard scanner. Written answers are graded against your rubric for you to approve.

How It Works

01 Upload your questions once, create infinite versions of your exam

- question order
- answer order
- unique values in math problems

02 Print and administer the exam

- Print the exams on regular paper to administer in class.
- Collect the exams. Scan and upload them using any scanner (no Scantron or special equipment needed).
- Our platform auto-grades the exams in under 2 minutes (total), and highlights ambiguous answers for you to review.

03 Review, export and share results

- Analyse results and auto-generate slides and questions to revisit challenging concepts in class.
- Update your gradebook instantly via our integration, or export to Excel and upload.
- Share individualized feedback with struggling students.

> *"This tool is a game changer! It eliminates Scantrons, reduces grading errors, and significantly improves assessment integrity."*

Common Questions

Why is this free?

Our mission is to save university instructors 5 hours per week. We have a range of free and paid tools to achieve this. This is one of our free tools. Hopefully it will save you time and you will use some of our paid tools too.

What equipment do I need?

Any office scanner is fine. If you don't have one, a basic scanner costs $150 to $200. Phone photos work (though you'll need to manually review about 10% of answers vs. near-zero with a scanner).

How accurate is it?

The system uses optical mark recognition (OMR) to read bubble marks and recognize handwriting. For printed multiple choice exams scanned on a standard scanner, accuracy is 99.9%. Written answers are graded against your rubric, and you review and approve the scores. You're not trusting a black box: you have the final say.

Can I create multiple exam versions?

Yes, you can create unlimited versions of the exams at the click of a button. You can choose two (or more) different versions (as is historically common in university exams), or choose to have unique exams for each student. Each takes the same time to create and grade (nearly instant). The randomization capabilities of the platform allow you to randomize numbers within math questions, the question order, the answer order, and even which questions are included in each version.
